IDEA, GOAL AND IMPLEMENTATION OF THE NFC PROJECT

- **Phase 1** - research and documentation of the buildings.
 - The research is focused on the homes of prominent Sofia doctors from the first half of the 20th century. Its aim is to promote the architectural and cultural heritage connected to their lives and achievements. The research combines archival documents, photographs, fieldwork, and interviews with heirs and current residents of the buildings.
 - **Phase 2:** After collecting, processing, and analyzing the information, a historical report will be created as a digital file. It will include key details about the building, such as its location, legal and physical status, architectural features, history, and the people connected to it. The report will also highlight the relationships between the building and its historical figures.
- **Phase 3:** Using of the historical references as a basis for creating detailed scenarios for short documentaries.
- **Phase 4:** Filming and editing of the various footage created. Creation of the video-product.
- **Phase 5:** Presentation of the videos and their popularization.
